## 2 Debian

```
1 sudo umount /dev/mmcblk0{,p1,p0}
2 curl -L 'https://raspi.debian.net/tested/20210823_raspi_3_bullseye.img.xz' | xzcat >/tmp/debian.img
3 sudo dd if=/tmp/debian.img of=/dev/mmcblk0 bs=4M status=progress
4 sync
5
6 sudo mkdir -p /mnt/raspi-boot
7 sudo mount /dev/mmcblk0p1 /mnt/raspi-boot
8 {
9     echo "root_pw=$(openssl rand -base64 12)"
10    echo "root_authorized_key=$(cat ~/.ssh/id_rsa.pub)"
11    echo "hostname=jeans-box"
12 } >>/mnt/raspi-boot/sysconf.txt
13 sudo umount /dev/mmcblk0{,p1,p0}
```

## 3 IPv6

```
1 ssh root@jeans-box
2 tee /etc/sysctl.d/privacy.conf <<'EOT'
3 net.ipv6.conf.all.use_tempaddr=2
4 EOT
5 sysctl -p
6
7 tee /etc/network/interfaces.d/eth0 <<'EOT'
8 auto eth0
9 iface eth0 inet dhcp
10
11 iface eth0 inet6 static
12     address 2001:7c7:2121:8d00::3
13     autoconf 1
14     accept_ra 2
15 EOT
16 systemctl restart networking
17
18 tee /etc/resolv.conf <<'EOT'
19 nameserver 2606:4700:4700::1111
20 nameserver 2606:4700:4700::1001
21 EOT
22 chatr +i /etc/resolv.conf
23 sed -i /etc/hosts -e 's/\tlocalhost/\tlocalhost jeans-box/g'
```

## 4 DNS

1	jeans-box	10800	IN	AAAA	2001:7c7:2121:8d00::3
2	*.jeans-box	10800	IN	AAAA	2001:7c7:2121:8d00::3

## 5 SSH

```
1 ssh root@jeans-box.example.com
2 apt update
3 apt install -y sudo curl openssh-server locales
4 systemctl enable --now ssh
5
6 echo "LC_ALL=en_US.UTF-8" | tee -a /etc/environment
7 echo "en_US.UTF-8 UTF-8" | tee /etc/locale.gen
8 echo "LANG=en_US.UTF-8" | tee /etc/locale.conf
9 locale-gen en_US.UTF-8
10
11 adduser jean
12 su jean -c "mkdir -m 700 -p ~/.ssh && curl 'https://github.com/jean.
    keys' | tee -a ~/.ssh/authorized_keys && chmod 600 ~/.ssh/
    authorized_keys"
13 usermod -aG sudo jean
14
15 echo 'PermitRootLogin no' | tee /etc/ssh/ssh_config.d/no-root.conf
16
17 passwd -d root
18 passwd -l root
19 chsh -s /sbin/nologin
20 rm ~/.ssh/authorized_keys
21
22 systemctl restart ssh
```

## 6 firewalld

```
1 ssh jean@jeans-box.example.com
2 sudo apt update
3 sudo apt install -y firewalld
4 sudo systemctl enable --now firewalld
5 sudo firewall-cmd --zone=public --add-interface=eth0 --permanent
6 sudo firewall-cmd --permanent --add-service=mdns
7 sudo firewall-cmd --permanent --add-service=llmnr
8 sudo firewall-cmd --reload
```

## 7 APT

```
1 ssh jean@jeans-box.example.com
2 sudo apt update
3 sudo apt install -y unattended-upgrades
4
5 sudo tee /etc/apt/apt.conf.d/50unattended-upgrades <<'EOT'
6 Unattended-Upgrade::Origins-Pattern {
7     "origin=*";
8 }
9 Unattended-Upgrade::Automatic-Reboot "true";
10 Unattended-Upgrade::Automatic-Reboot-Time "02:00";
11 EOT
12 sudo systemctl enable --now unattended-upgrades
13 sudo unattended-upgrades --debug
```

## 8 Podman

```
1 ssh jean@jeans-box.example.com
2 echo 'deb https://download.opensuse.org/repositories/devel:/kubic:/
   libcontainers:/stable/Debian_11/ /' | sudo tee /etc/apt/sources.list
   .d/libcontainers.list
3 curl -L "https://download.opensuse.org/repositories/devel:/kubic:/
   libcontainers:/stable/Debian_11/Release.key" | sudo apt-key add -
4 sudo apt update
5 sudo apt upgrade -y # Prevent conflicts with eventual prior Podman
   install from Debian repos
6 sudo apt install -t Debian_11 -y podman
7 echo 'unqualified-search-registries=["docker.io"]' | sudo tee /etc/
   containers/registries.conf.d/docker.conf
8 sudo systemctl unmask podman-auto-update.service
9 sudo systemctl unmask podman-auto-update.timer
10 sudo systemctl enable --now podman-auto-update.timer
11 sudo systemctl enable --now podman-restart
```

## 9 Traefik

```
1 sudo mkdir -p /etc/traefik
2 sudo tee /etc/traefik/traefik.yaml<<'EOT'
3 entryPoints:
4   web:
5     address: ":80"
6
7   websecure:

161 EOT
```

```
160
161 sudo podman run -d --restart=always --label "io.containers.autoupdate=
    image" --net=host -v /var/lib/traefik:/var/lib/traefik -v /etc/
    traefik:/etc/traefik --name traefik traefik
162 sudo podman generate systemd --new traefik | sudo tee /lib/systemd/
    system/traefik.service
163 sudo systemctl daemon-reload
164 sudo systemctl enable --now traefik
165
166 sudo firewall-cmd --permanent --add-service=http
167 sudo firewall-cmd --permanent --add-service=https
168 sudo firewall-cmd --permanent --add-port=8443/tcp
169 sudo firewall-cmd --reload
170
171 curl -Lu jean:asdf https://traefik.jeans-box.example.com/ # Test the
    Traefik dashboard
172 ssh -p 8443 jean@jeans-box.example.com # Test SSH over TCP
173 ssh -o ProxyCommand="openssl s_client -connect ssh.jeans-box.example.
    com:443 -quiet" jean # Test SSH over TLS
```

## 10 Cockpit

```
1 echo 'deb http://deb.debian.org/debian bullseye-backports main' | sudo
    tee /etc/apt/sources.list.d/backports.list
2 sudo apt update
3 sudo apt install -t bullseye-backports -y cockpit cockpit-podman
    cockpit-pcp
4
5 curl https://cockpit.jeans-box.example.com/ # Test Cockpit
```

## 11 Gitea

```
1 sudo mkdir -p /var/lib/gitea
2 sudo podman run -d --restart=always --label "io.containers.autoupdate=
    image" --net slirp4netns:allow_host_loopback=true,enable_ipv6=true -
    p 3000:3000 -p 3022:22 -v /var/lib/gitea:/data -v /etc/timezone:/
    etc/timezone:ro -v /etc/localtime:/etc/localtime:ro -e 'USER_UID
    =1000' -e 'USER_GID=1000' --name gitea gitea/gitea
3 sudo podman generate systemd --new gitea | sudo tee /lib/systemd/system
    /gitea.service
4 sudo systemctl daemon-reload
5 sudo systemctl enable --now gitea
6 sudo firewall-cmd --permanent --add-port=2222/tcp
7 sudo firewall-cmd --reload
8
```

```
9 curl https://gitea.jeans-box.example.com/ # Test Cockpit
```

Now visit <https://gitea.jeans-box.example.com/> and run the Wizard; use the following values:

- SSH Server Domain: `gitea.jeans-box.example.com`
- SSH Server Port: `2222`
- Gitea Base URL: `https://gitea.jeans-box.example.com/`
- Use your email SMTP server in [Email Settings](#), enable [Email Notifications](#) and [Require Email Confirmation to Register](#)
- Under [Server and Third-Party Service Settings](#), enable [Disable Self-Registration](#) (if you want to prevent others from using Gitea)
- Under [Administrator Account Settings](#), create your admin account

Note that the installation might take a while (about 1 minute)

## 12 Dex

First, setup Gitea by visiting <https://gitea.jeans-box.example.com/user/settings/applications> and adding a new OAuth2 application with Application Name `Dex` and Redirect URI `https://dex.jeans-box.example.com/callback`. Note the client ID and client secret; we'll need them in the following.

```
1 sudo mkdir -p /etc/dex
2 sudo mkdir -p /var/lib/dex
3 sudo touch /var/lib/dex/dex.db
4 sudo chown -R 1001:1001 /var/lib/dex/
5 sudo tee /etc/dex/config.yaml << 'EOT'
6 issuer: https://dex.jeans-box.example.com
7
8 storage:
9   type: sqlite3
10  config:
11    file: /var/dex/dex.db
12
13 web:
14   http: 0.0.0.0:5556
15   allowedOrigins: ['*']
16
17 staticClients:
18   - id: liwasc
19     redirectURIs:
20       - https://pojntfx.github.io/liwasc/
21     name: "liwasc"
22     public: true
23   - id: bofied
```

```

24     redirectURIs:
25         - https://pojntfx.github.io/bofied/
26     name: "bofied"
27     public: true
28
29 connectors:
30     - type: gitea
31       id: gitea
32       name: Gitea
33       config:
34         clientID: yourclientidfromgiteahere
35         clientSecret: yourclientsecretfromgiteahere
36         redirectURI: https://dex.jeans-box.example.com/callback
37         baseURL: https://gitea.jeans-box.example.com
38 EOT
39 sudo podman run -d --restart=always --label "io.containers.autoupdate=
    image" --net slirp4netns:allow_host_loopback=true,enable_ipv6=true -
    p 5556:5556 -v /var/lib/dex:/var/dex -v /etc/dex:/etc/dex --name dex
    ghcr.io/dexidp/dex dex serve /etc/dex/config.yaml
40 sudo podman generate systemd --new dex | sudo tee /lib/systemd/system/
    dex.service
41 sudo systemctl daemon-reload
42 sudo systemctl enable --now dex

```

You can test it out by visiting <https://pojntfx.github.io/liwasc/> and trying to log in using the following credentials:

- Backend URL: `ws://example.com/` (we'll set this later; this is just to try out the login)
- OIDC Issuer: `https://dex.jeans-box.example.com`
- OIDC Client ID: `liwasc`
- OIDC Redirect URL: `https://pojntfx.github.io/liwasc/`

And authorization prompt from Gitea and Dex should show up, after which liwasc's home page should load (showing an error like `Failed to construct 'WebSocket': An insecure WebSocket connection may not be initiated from a page loaded over HTTPS.`).

## 13 liwasc

```

1 sudo mkdir -p /var/lib/liwasc
2 sudo podman run -d --restart=always --label "io.containers.autoupdate=
    image" --net host --cap-add NET_RAW --ulimit nofile=16384:16384 -v /
    var/lib/liwasc:/root/.local/share/liwasc -e
    LIWASC_BACKEND_OIDCISSUER=https://dex.jeans-box.example.com -e
    LIWASC_BACKEND_OIDCLIENTID=liwasc -e LIWASC_BACKEND_DEVICENAME=eth0
    -e LIWASC_BACKEND_PERIODICSCANCRONEXPRESSION='0 0 * * *' --name
    liwasc pojntfx/liwasc-backend

```

```
3 sudo podman generate systemd --new liwasc | sudo tee /lib/systemd/
  system/liwasc.service
4 sudo systemctl daemon-reload
5 sudo systemctl enable --now liwasc
```

Now visit <https://pojntfx.github.io/liwasc/> as we did before and use `wss://liwasc.jeans-box.example.com/` as the backend URL (note the trailing slash!).

## 14 bofied

```
1 sudo mkdir -p /var/lib/bofied
2 sudo podman run -d --restart=always --label "io.containers.autoupdate=
  image" --net host --cap-add NET_BIND_SERVICE -v /var/lib/bofied:/
  root/.local/share/bofied -e BOFIED_BACKEND_OIDCISSUER=https://dex.
  jeans-box.example.com -e BOFIED_BACKEND_OIDCLIENTID=bofied -e
  BOFIED_BACKEND_ADVERTISEDIP=100.64.154.249 --name bofied pojntfx/
  bofied-backend
3 sudo podman generate systemd --new bofied | sudo tee /lib/systemd/
  system/bofied.service
4 sudo systemctl daemon-reload
5 sudo systemctl enable --now bofied
6 sudo firewall-cmd --permanent --add-port=67/udp
7 sudo firewall-cmd --permanent --add-port=69/udp
8 sudo firewall-cmd --permanent --add-port=4011/udp
9 sudo firewall-cmd --reload
```

Now visit <https://pojntfx.github.io/bofied/> and login using the following credentials:

- Backend URL: `https://bofied.jeans-box.example.com/`
- OIDC Issuer: `https://dex.jeans-box.example.com`
- OIDC Client ID: `bofied`
- OIDC Redirect URL: `https://pojntfx.github.io/bofied/`
